DETAILED ACTION

Allowable Subject Matter

1. Claims 3, 6, 8, 10, 12-16 and 19 allowed.
2. Claims 5 and 7 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1, 4, 9, 11, 17, 18 and 20 rejected under 35 U.S.C. 103(a) as being unpatentable over Akram (6,297,547) in view of Takeda (6,414,381) further in view of Bezama et al. (6,459,039).

Regarding Claims 1, 4, 9, 11, 17, 18 and 20, Akram discloses a mounting structure for multiple semiconductor dies in a package where a semiconductor device includes multiple dies, in which a first die and a second die are mounted on a leadframe. The bond pads on the first and second dies are wire-bonded to the leadframe. The first die, the second die and leadframe are encapsulated in a package. Akram fails to disclose the required interposer structure and the required nonconductive interposer structure. However, Takeda discloses an interposer for separating stacked semiconductor chips mounted on a multi-layer printed circuit board where the required interposer structure is disclosed. Furthermore, Bezama et al. disclose a method and

Art Unit: 2826

apparatus to manufacture an electronic package with direct wiring pattern where the required non-conducting interposer structure is disclosed.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required interposer and the required non-conducting interposer structure in Akram as taught by Takeda and Bezama et al. respectively in order to have a semiconductor packaging structure with smaller size.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
